DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Goerz et al., US patent 5472769.

'769 discloses a multi-layered ballistic resistant fabric for garments, "one layer made of light weight, **durable fibers 11-15 knitted** to similar fibers 16-19 in a random **knitted** arrangement so as to resist lateral motion therebetween when a pointed object contacts the layer of material. The fibers 11-19 are preferably made **from aramid**, such as the aramid sold under the trademark Kevlar. **Such fibers produce a fabric which is extremely light in weight, highly durable with great strength resistance.**

As best seen in FIG. 4, individual layers 10 of the knitted/woven material **are secured together in order to provide a multi-layer fabric.** The method of attaching individual layers 10 together is conventional, and may include adhesive bonding, thermal bonding, **fabric stitching** or any other

technique presently used in the art. The phantom lines 28 illustrated in FIG. 4 illustrate one rectilinear pattern for the attaching seams (col. 3, lines 44-col. 4 line 20)."

"The anti-penetration capability of the invention can also be enhanced by the use of a deflection layer such as those illustrated in FIGS. 5-8. "

"With reference to FIG. 5, one form of such a deflection layer comprises a **fine wire mesh 30 with individual strands 31 fabricated from a high strength metal wire such as stainless steel wire** or titanium wire (col. 4, lines 46-53)."

Mesh is an open woven fabric as shown in the figures.

Since layers are disclosed as stitched, the layers would all be 'attached' as claimed.

Figures clearly show all metallic fibers "spread over the surface" as claimed.
